what the heating depends on
gold in tumour
4 to 16 μg/g
tumour size
6 to 15 mm
light reaching tumour
50% to 100%
blood flow
high to low
tissue conductivity
0.6 to 0.4 W/m K
index around rods
1.33 or 1.5 (best 1.45)
38
41
43
46
centre temperature at 15 min (°C)
the unknown: shell permeability
time to release 90% at 42 °C (s)
heating time
wall would
slow release
lipid sets the pace
doxorubicin permeability of the wall (cm/s)
